sebastianzegarra.example (down atm,
sorry)

Skype: sebas.zb.2011
DOB: 14/06/1989
Driving licence A-I + own car

ABOUT ME / PROFILE

Full stack developer with more than 11 years of experience (12 in March), from jQuery + PHP shops in Lima to typed React front-ends and event-driven backends on AWS. I have been the person who is called when the queue is stuck at 3am and also the person who writes the onboarding docs afterwards. Comfortable owning a feature end to end: schema, API, UI, pipeline, dashboards. Most of my last 5 years has been with distributed teams (Lima, Bogota, Austin), so async written communication is normal for me. Currently doing a lot of platform work (k8s, Terraform) although what I enjoy most is product work with real users. Looking for a senior / staff position where the team ships weekly and code review is a conversation, not a gate.

TECH I ACTUALLY USE

Front	React (8 yrs, hooks era + some class legacy), Next.js 13/14/15, TypeScript (strict, 6 yrs), JavaScript ES6+, Redux (legacy), Zustand, TanStack Query, Tailwind, CSS Modules, a bit of Svelte on weekends
Back	Node.js (Express, NestJS), Python (FastAPI; Django 1.x-3.x on old stuff), Go (one service, still running), GraphQL (Apollo + a bit of Yoga), tRPC, REST obviously
Data	PostgreSQL (partitioning, PL/pgSQL when desperate), MySQL 5.7/8, Redis, MongoDB (inherited), Elasticsearch/OpenSearch, RabbitMQ, Kafka (basic), dbt + BigQuery for analytics-ish things
Infra	Docker, Kubernetes (EKS), Terraform, AWS: ECS/EKS, Lambda, S3, RDS, SQS, CloudFront, some GCP, GitHub Actions, GitLab CI, Jenkins (sadly), Datadog, Grafana + Prometheus, Sentry
Testing	Jest, Vitest, Playwright, Cypress (older projects), pytest, k6 for load, contract tests with Pact (tried, partially)
Other	Figma (read-only), Jira/Linear, event storming, mentoring juniors, technical interviews (~60 done), on-call rotations, Peruvian e-invoicing (SUNAT XML, unfortunately an expertise)

Rusty but usable: PHP 7 (Laravel), Ruby, jQuery, Ansible, Kotlin (Android, 2017). Want to learn properly: Rust, event sourcing, WebGPU.

Side projects & open source

pg-lazy-migrate - small Node CLI to run Postgres migrations without locking big tables. ~800 stars, still maintained (barely). 2021 - present. [github.example/szegarra-dev/pg-lazy-migrate](#)

Recetario Criollo (2023) - recipe app for my family, Next.js + Supabase + a Telegram bot that parses photos of my mother handwritten recipes. ~200 monthly users, all of them related to me.

combi-eta - toy real-time ETA for Lima bus routes using open GTFS data. Worked for 3 months until the feed changed. 2019, archived.

tiny-obs - OpenTelemetry-ish tracer in 400 lines of TS, written for a talk. Archived 2024. Also: contributor to NestJS docs (es), 3 merged PRs to Playwright (flaky test fixes), occasional Stack Overflow answers about pg locks (12k rep).

WORK EXPERIENCE (newest first, I think)

Staff Engineer / Tech Lead - Ayniware Health S.A.C.

Mar 2021 - present | Lima, hybrid | ~55 engineers, health-tech SaaS (PE/CO/MX)

Started as Senior FS Engineer, promoted to Tech Lead in 2023 and to Staff in Jan 2025. Lead of the "Records" team (5 people, 2 of them in Bogota) and de-facto owner of the ingestion pipeline.

- Led the split of a 400k-line Rails+Node monolith into 6 services; migration ran 14 months with no downtime windows. p95 latency of the patient timeline went from 2.4s to 380ms.
- Designed the clinical ingestion pipeline (SQS + Lambda + Postgres partitions): 1.2M documents/day, cost down 38% after moving the hot path off Kafka.
- Built the internal design system with another dev (React + TS + Storybook), adopted by 4 teams.
- Interviewing, onboarding, mentoring 3 juniors -> 2 of them are now mid-level.
- On-call rotation, incident reviews, and the boring but necessary runbooks.

Stack: TypeScript, React/Next, NestJS, Postgres, AWS (EKS, Lambda, SQS), Terraform, Datadog.

Freelance / independent contractor (in parallel, evenings)

2019 -> 2022 (irregular), invoicing with RUC

Small projects for agencies and two direct clients. Ecommerce integrations (Shopify + custom Node middleware), electronic invoicing against SUNAT for a small distributor (painful), a booking system for a dental clinic in Miraflores (Django + Vue, still running), and a data-scraping thing I will not describe here. Roughly 15-20h/week when there was work.

Senior Full Stack Developer @ Antawara Logística

07/2018 - feb 2021 (2 yr 7 mo), Lima / on-site (San Isidro)

- Owned the carrier-integration platform: 22 carrier APIs behind one internal contract. Wrote the retry/idempotency layer that stopped duplicate shipments (was ~300/month, went to ~4).
- Rewrote the tracking front-end (AngularJS 1.5 -> React 16 + TS). 9 months, incremental, strangler-fig style.
- Introduced Playwright e2e + preview environments per PR; release cadence went from monthly to ~3x/week.
- Postgres tuning: one query from 40s to 200ms (it was a missing composite index, of course).

Full Stack Developer, Suriwave Media

2016-09 to 2018-06 :: Arequipa (relocated), then remote from Lima

Digital media company, ~8M monthly readers across PE/BO/EC. Worked on the CMS and the ad-serving side. Node + Express + MongoDB, then a painful but successful migration of the editorial CMS to Postgres. Built the AMP versions of the article pages (RIP). Also did the SEO-ish work: structured data, sitemaps, core web vitals before they were called that.

Left because the office moved to a new district and the commute became 2h/day.

Backend Developer - Tarpuykuy Digital (agency)

Jan '15 - Aug 2016

Agency work: 14 projects in 20 months, PHP 5.6/Laravel 5 mostly, some WordPress plugins nobody should look at, and my first Node API. Learned to estimate badly and then to estimate less badly. Direct contact with clients, some of them at 11pm.

Junior Web Developer, Grupo Sacsana Seguros (internship -> contract)

summer 2014 - dec 2014, Lima (Cercado)

Internal tools for the insurance division. Java 7 + JSP (yes), plus a lot of SQL. Wrote a report generator that apparently is still in production.

Career gap: sep 2013 - jun 2014, family reasons + travelling (Cusco, Puno, north coast). Happy to explain.

CERTS, COURSES, ETC

- AWS Certified Solutions Architect - Associate (2022, expired 2025, planning to renew)
- CKAD - Certified Kubernetes Application Developer, Nov 2023, valid until Nov 2026
- Advanced React patterns (online course) - 2021, completed
- Scrum Master PSM I - 2017 (never used it, honestly)
- Web accessibility course, WCAG 2.2 - online, 2024, 40h

Talks / writing

"Migrating a monolith without stopping the world" - LimaJS meetup, Oct 2023. | "Postgres partitions for the impatient" - internal Ayniware tech talk, 2022, later a blog post (~30k views). | Workshop for a bootcamp cohort in Trujillo, 2021 (remote). | I write occasionally at sebastianzegarra.example/blog (4 posts in 2 years, I am not a machine).

EDUCATION

Bachiller / BSc in Systems Engineering - Universidad Privada Coriwayra, Lima

2009 - 2013 (5 years of study, thesis defended in 2014). GPA 15.8/20. Thesis: "Distributed system for urban route recommendation in Lima", 17/20. Colegiatura CIP: in progress, never finished the paperwork.

MSc Software Engineering and Distributed Systems - Universidad Nacional de Sumaqpata (distance)

2017 - 2019, NOT finished (completed 42 of 60 credits). Stopped when I changed jobs. May finish it some day.

Bootcamp: Full Stack JS - Laboratoria Andina (private academy, Lima)

sept-dec 2015, 400h, part-time. Did it while working at the agency to fill the JS gaps.

Also: technical diploma in Computing and Networks (2007-2009), Instituto Técnico Ayni Wasi, Lima. Top of the class.

OTHER STUFF

Languages: Spanish (native), Quechua (basic, two semesters at university, mostly forgotten), English C1 - daily working language for 6 years, worked with teams in Bogota and Austin. Portuguese: I get by in Sao Paulo. German A1 (Duolingo streak, does not count).

Availability: 30 days notice period. Salary expectation: negotiable, current band is S/ 15,000 - 17,000 monthly gross, or USD 4.5-5.5k/month if it is a remote USD contract. Open to 100% remote in American timezones; can travel to Lima office if needed.

Volunteering: mentor at a women-in-tech bootcamp, 2 cohorts, 2022-2023. Coach at a local futsal team on Saturdays.

Hobbies: mountain running (2 ultras finished, one in Huaraz), cooking, mechanical keyboards (too many), bad chess (1450 elo).

References available upon request. Portfolio and code samples on my GitHub. Last updated: Feb 2026 (some dates may be off by a month or two).

Fictional sample CV, generated for testing form-filling flows. The person, the companies, the schools, the links and the phone number are invented; the web addresses use reserved domains (.example / example.com) so they cannot resolve.
